

INTRODUCING THE INTEGRATED ELECTRONIC HOME

Imagine a life made simpler in the home, by having fingertip electronic control over your entertainment, lighting, security and heating, all from the single touch of a button. Envisage a home electronic system designed and installed to reflect your personality and lifestyle. One that is intuitive to operate and which blends perfectly with your interior's design so that your friends won't even know it's there - until you want them to, that is. Play a hi-fi system that breathes beautiful music into every room or designated zone through unseen speakers - your music will follow you wherever you go. Enjoy a home cinema system which will be both visually and audibly far better than your local movie house; an environment in which the curtains close and the temperature and

lighting are automatically adjusted the moment you walk in the room. Play any album, track or movie from your entire CD and DVD collection at the touch of a button and from any room in the house. Program and operate your home's lighting to improve the comfort and ambience of your own environment whilst ensuring optimum energy efficiency. Integrate communications and home networking; link your CCTV system to your Multi-room Audio Visual system and view CCTV cameras at the touch of a button from any location in the house. And all this and much more can be achieved without the need for any unsightly wires or trailing cables. Welcome to today's integrated electronic home, allowing you to control, conceal and operate electronic systems as never before.

CINEMA ARCHITECTS specialise in custom home theatre design and installation, offering a total solution whatever your needs may be. Multi-room systems; home automation and dedicated home theatres can enhance your life beyond your wildest dreams. A well-established CEDIA (Custom Electronic Design and Installation Association) certified company, we have enjoyed 30 years in the audio visual industry. We offer a broad range of high-tech products and services for private and commercial use, which are constantly upgraded as a result of our continuous search for quality products. We draw up customised designs in 3D visualization and Auto-CAD formats, complete home automation system designs and home cinema layouts. Our in-house team consists of highly trained integrators, programmers, audiovisual system designers, technicians, draftsmen and interior designers. All staff is CEDIA qualified. We install stereo systems; multi-channel single room

Let us entertain you

systems; multi-room systems and supply the relevant maintenance thereafter. Complicated wiring is taken care of, ensuring that perfect sound and video reach you wherever you choose to be. We will also consult with your architect to ensure that your future home is entertainment-ready before a single brick has been laid. Where specialist services are required, such as structural alterations, we consult with companies and individuals that will ensure the owner's, and our, specifications are readily met. Hi Fi Specialists supplies a range of top quality components to suit each application. Please note that while there are some products that we have had

a long association with, supplying a specific product is not always the focus, but rather the supply of a total solution. You may already own certain components and may want to use these in a dedicated stereo or multi-channel setup. We will use the existing equipment where reasonably possible and build your system around it. Should you want to use a brand name that we do not supply and you do not yet have, we will source this for you as well. For many home owners the choice of a television set is a personal one. Should you wish to purchase your own unit, please study our guide for high definition televisions first, and avoid buying an expensive lemon!
